### COMPANY OVERVIEW

The Proudfoot Group is a Service-Disabled Veteran-Owned, Woman-Owned Small Business based in North Carolina. We work with companies building AI platforms that put governance, ethics, and safety at the center of the conversation. Our core focus is partnerships with principled technology companies that share our commitment to responsible innovation.

We connect emerging AI platforms with the government agencies, defense organizations, and commercial enterprises that stand to benefit from them. We bring decades of experience in compliance, national security, and operational leadership to every engagement.

### CORE COMPETENCIES

#### AI Integration & Advisory Services:

We specialize in identifying AI-driven technologies that seamlessly integrate with existing federal systems. Our approach focuses on evaluating emerging AI tools for real-time AI governance and guardrails, model-agnostic policy engines, and ethical model enforcement.

#### Bridging AI Innovators & Government Stakeholders:

We connect emerging AI technology companies with federal agencies through knowledge exchange, pilot assessments, and collaborative frameworks to ensure AI solutions are tailored to government requirements and aligned with national security objectives.

#### Strategic Consulting for Operational Enhancement:

We provide guidance on how AI can improve autonomous system decision-making, from automating routine processes to enabling real-time insights in high-stakes environments, with emphasis on ethical, legal, and societal implications.

#### Commitment to Compliance & Innovation:

Leveraging our SDVOSB/WOSB status, we prioritize adherence to federal acquisition regulations (FAR), cybersecurity standards (NIST frameworks), and diversity in supply chains, delivering value-driven recommendations that prioritize transparency and long-term impact.

### DIFFERENTIATORS

- Multiple AI platforms ready for sandbox testing and rapid pilot-to-production deployment.
- Access to a portfolio of patented real-time AI governance and enforcement platforms built for mission-critical reliability.
- Platforms monitor AI and data-driven systems against global standards with corrective feedback to developers.
- Prevention of bias drift, security risks, and non-compliance with instant logs, dashboards, and corrective feedback loops.
- Combined 60+ years of Marine Corps JAG, compliance, and executive leadership experience.
